

A unique partner for every step of your project!

CRATOS 3.15 + X31.5 Series

FORCED CIRCULATION EVAPORATOR | HOT-BREAK & COLD-BREAK

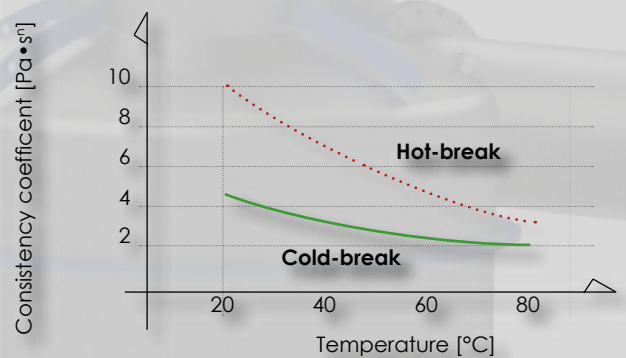

The forced circulation concentrate systems were originally designed for the concentrate of tomato juice & fruit puee.

Our evaporators «**CRATOS 2500 Series**» can be applied to all the fields of agri food industry in which it is necessary to remove water from the raw material, in order to guarantee a finished product with high concentrates values as well as ideal organoleptic features.

However, concentration is an intricate step requiring enough care to be taken to prevent any loss volatiles and degradation of esential chemical compounds present in the liquid food.

The quality of concentrate is hugely dependenton the flavor and aroma components and suspended solids in a liquid food.

We are your partner with whom make grow your business

ORION ENGINEERING S.R.L. company was founded after over 30 years of partnerships with national and international market's best Food Processing players.

We specialized on the development of **«tailor-made» solutions** for agri-food prototypes and installations for small and middle production.

ORION ENGINEERING S.R.L. can count on a multidisciplinary team qualified on different lateral skills. The daily effort, together with a constant activity of research and development, marked the company's worldwide success.
